Post List Page Development

Requirements

- Please develop a post list page that allows post retrieval on a per-page basis without page flickering.
- The post list should include the post title, author's nickname, and partial content of the most recently registered comment.

Constraints

- The post list page should be rendered using Django templates.
- The post list API should be implemented using Django REST Framework.
- The code that calls the post list API should be implemented using AJAX.
- Authentication-related functionalities should not be implemented.

References

- The number of posts displayed on a single page can be freely set.
- No test data will be provided.
- Page UI style and layout are not included in the evaluation criteria.

Evaluation Criteria

- Code readability
- Code efficiency
- Functionality
- (Optional) Test code

Submission Method

- Please compress the project and reply via email or provide the address of a GitHub public repository.
